

# COST OPTIMIZATION

Significantly reduce your corporate mobility spend without service disruptions or provider changes

Leverage patented technology, automated processes and specialized knowledge from vMOX to find the lowest possible costs for your mobile environment at every given moment.

Mobile usage is dynamic, but most corporate mobile rate plans are static. Variables like employee turnover, international travel, vacations and industry 'busy seasons' can impact your company's mobile device usage every month. Management approaches based on manual, one-time audits are stale and often lead to chaos. Mobile optimization today must be done proactively on a regular basis, and tools and automated processes are necessary to keep costs low, ensuring you only buy what you need.

vMOX's algorithmic approach allows it to automate decisions and support wireless optimization at scale. This approach is quantitatively more advanced than the tools available through spreadsheets and standard business intelligence tools.

# PUT YOUR TRUST IN THE BEST

Experience and technology that guarantees financial success

## Patented Technology

- Unique algorithm-driven software evaluates thousands, if not millions, of optimization strategies to maximize savings
- Comprehensive database of plans and features across providers, so selection is a best fit every bill cycle
- Single-source mobility portal provide centralized reporting with proactive alerting
- Daily capacity updates and management, including canceled lines
- Real-time data available through vMOBILITY app

## Automated Processes

- Bidirectional third-party integrations provide real-time data for proactive management and optimization
- Integrations allow for immediate order processing, ensuring timely realization of savings
- Recommendations automatically pushed to client for review and implemented via API upon approval

## Expert Knowledge

- 100% focus on mobility for more than 10 years allows us to quickly react to market changes and build best-in-class solutions
- Team of US-based wireless industry experts impacting bottom lines for clients of all sizes, industries and geographies
- Dedicated Mobility Advisor for every client tasked with turning data and analytics into actions, taking optimization efforts to the next level
- Customized, forward-thinking optimization strategy taking into consideration your internal business requirements and policies

**No service disruptions, provider changes or impact to your end users, carrier relationships or contracts**

**Cost savings potential of 20 to 40%**

**Patented optimization engine that analyzes in minutes**

**Ongoing, near-real time monitoring with proactive alerts**

**Initial savings implemented within 7 days of project start**

**Strong focus on plan and feature management**

**Cost avoidance strategies to reduce in cycle overages**

**Use of predictive analytics to reduce required adjustments later**

**Granular analytics and custom reporting at no extra charge**

**Realized savings reporting for accurate ROI measurement**

**Bill quality assurance and risk assessments**
